

All Grades/Apple-Seed Toss Game Score Card. Place an X on the number of apple points for each game played.

Game 1.

Game 2.

Game 3.

Game 4.

Game 5.

NAME _____ _____

Total Apple Points _____

All Grades/Apple-Seeds.

DO NOT EAT OR CHEW APPLES SEEDS.

Warning: Is there cyanide in apple seeds?

"Amygdalin" is a cyanogenic glycoside compound which commonly occurs in the seeds or kernels of apples, almonds, apricots, cherries, and peaches, as well as the stems, leaves and roots of many rose (rosaceae) family species.

The hydrolysis of amygdalin can give rise to hydrogen cyanide. Normally, the presence of amygdalin alone in these seeds and kernels is not dangerous. However, cyanide can be formed when the seed is crushed and moistened.

Note: Acute intoxication and death have been reported in children following the ingestion of apricot seeds, which are capable of releasing 217 mg of cyanide per 100 g of moist seed.

If poisoning is suspected...seek immediate medical treatment!!!
